

About FOLDSCOPE

The Foldscope is an ultra-affordable paper microscope. The instrument's optical quality, durability in the field, price, and versatility make it a powerful scientific tool. Foldscoopes are especially useful where larger, expensive instruments are impractical due to cost, size, complexity and availability to the community. Especially when combined with the power of cellphones to record images and video, Foldscope provides an incredible scientific tool for citizens and researchers around the world.

From infectious microorganisms that affect human health to the microscopic eggs of pests that infest agricultural crops, many problems in the world arise from causes which can only be seen with a microscope. We are looking for motivated individuals to take benefit from the use of Foldscoopes.

About the Course:

The course is to provide up-gradation of knowledge and skills for Faculty/scientist/ Research Scholar/ students who are interested for foldscope related research, field studies, its folding and functioning.
