*Handwritten signature in blue ink over a purple stamp that reads 'Vivekananda Global University, Jaipur'.*

**Some of the software's used by the University for Digyangjan are:**

**1. Braille translation software**

It is a computer program that converts printed text into braille code. A braille embosser is similar to an ink printer in that it embosses or prints the braille onto paper. Transcribers enter text into a standard word processing program, edit it, and then save it as an electronic file.

**2. Text to speech**

Text-to-speech (TTS) is a type of assistive technology that reads digital text aloud. It's sometimes called "read aloud" technology. TTS can take words on a computer or other digital device and convert them into audio. It is helpful for persons who are challenged to type with keyboard or access device buttons.

**3. Voice command software**

Voice recognition software is used to convert spoken language into text by using speech recognition algorithms. It can be used by people with disabilities, for in-car systems, in the military, and also by businesses for dictation, or to convert audio and video files into text. This is helpful for persons who can't operate systems, they can directly command with voice.

A handwritten signature in blue ink is written over a purple rectangular stamp. The stamp contains the text "Maharaja Gopabandhu University" and "Bhubaneswar" in a stylized font.
