**Event Venue:** Auditorium, Technology Block, VGU

### Brief Report

Computer aided designing software not only provides the possibility to speed up the process of putting a new model into production and improve the quality of the products, but also reduces material costs and labor intensity. It is a textile software that aids in the manufacturing processes ranging from planning weaves patterns, structure, clothing material, and other related tasks. It automates material and resource planning, production tracking and scheduling life cycle of the product.

### Conclusion

A six days skill development workshop was organized in association with Weavers service organization, Ministry of Textile at New Delhi, where students got an opportunity to learn new age technology which can help them in entrepreneurship development and boost their skills and capacity for future. 10 students participated in this activity.
