Entrepreneurship Program on Think Solar ,Department of Design, VGU ,Jaipur. Date- 8th April 2019

Brief Report

Solar energy holds the potential to improve the quality of life of people in developing countries. Solar education and skill development are important for promoting solar energy technologies to communities which do not have access to clean energy in developing countries. In higher education, advanced and in-depth study of solar energy helps students equip themselves with designing, improving and innovating new solar systems as per the needs of local communities. Students were made aware that skill development initiatives can form part of the government's action plan and industries and academic institutes can play a significant role in it.
